

Pipeline Testing

Get a Competitive Edge on Your Project With Our “In-Field Sign-Off”

Pipelines Services

WaterBiz designs pipelines: irrigation, water reticulation and CSG treated water pipelines. We design pump stations and delivery systems, and can supervise construction and certification of completed works.

Introducing a complete full service delivery profile, WaterBiz now provides a test service for pipelines. The services include pressure testing pipelines at installation and during operations.

Quality Testing

Defects in a pipeline are a show stopper in the construction process.

Leaking operating pipelines present a lot of risk to the operator. If a pipe displays signs of leaks or loss in pressure your system could be operating inefficiently—leading to excess operating costs and significant repair costs if defects aren't detected early.

WaterBiz can test pipes and pipelines throughout the construction process. Our team and quality systems allow for immediate calculation in the field and a sign off on pipelines that pass. This means that project delays can be minimised.

Our pipeline testing meets the requirements of AS2885.5, AS2033 and AS4037, and we are able to provide a sign off from a Registered Professional Engineer of Queensland against the Australian Standards.

Get the Best Advice:

WaterBiz has specialist teams involved in soil and water engineering for all water related projects. Our business is based on assisting our clients in the formulation of sustainable development strategies - including compliance, design, and reporting.

We deliver:

- ◆ Experience and efficiency;
- ◆ Competitive rates; and
- ◆ Holistic solutions provided through our AS/NZS ISO 9001 Quality Management System certification.

A Practical Approach:

WaterBiz is directly involved in all steps of our projects, from site survey, assessment, design and contracted site works. We work in the field and our people are regionally based; providing our clients with the most competitive costs available.

Customer service is our highest priority. We bring our practical experience to our clients by providing easy to understand plans and designs. Our personnel are strategically located to be able to partner you on your site to ensure works are implemented effectively and efficiently.
